Business idea description

Business idea description: NFQ

NFQ is an integrated audit service for small and medium-sized businesses (SMBs) that replaces three mandatory inspections with a single procedure and reduces the risk of fines and suspension of operations.

Relevance of the idea:

In the context of tighter control by EMERCOM (the Ministry of Emergency Situations), Rospotrebnadzor² and Rostrud³, Russian businesses suffer significant losses from fines, suspension of operations and litigation. More than 95% of small and medium-sized enterprises have no in-house safety specialists, while the services available on the market are fragmented and do not offer an integrated solution. NFQ closes this gap by providing a universal service that ensures full compliance with the law.

According to the data of the state report⁴, in 2024 a total of 20 869 control and supervisory measures were carried out in Moscow, during which 69 883 violations were identified. Thus, there were on average 3.3 violations per inspection.

For comparison, in 2021 a total of 3 316 violations were recorded in 482 inspections.

https://rospn.gov.ru/documents/details.php?ELEMENT_ID=21797

Dynamics of the number of inspections and identified violations⁵ (2021-2023)

Several important conclusions can be drawn from the data presented:

1. The scale of control has grown sharply. Over three years the number of inspections increased almost 8-fold, from 11 425 inspections in 2021 to 82 585 in 2023.
2. Between 2021 and 2023, while the number of supervisory measures grew almost 8-fold, the number of violations grew 15-fold (from 31 959 to 417 739 violations).

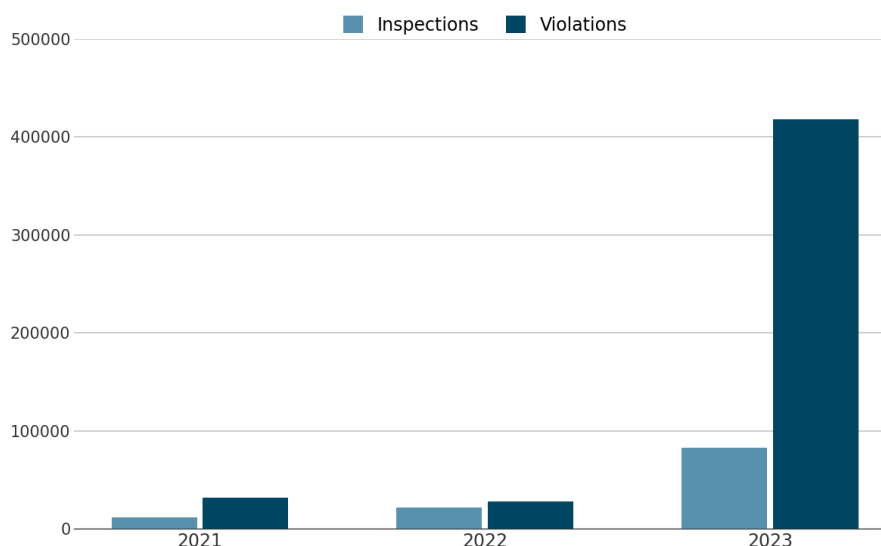

Figure 1

1. International context and market maturity:

In economically developed countries, integrated audit and business support services covering fire safety, sanitary standards and occupational safety constitute a mature market. In the European Union, the USA and Canada the following practices are widespread:

- regular preventive audits of enterprises;
- engagement of independent specialised companies;
- outsourcing of regulatory compliance functions.

These markets are served by large and medium-sized companies providing **integrated audit** services, which include:

- risk assessment;
- documentation review;
- staff training;

⁵ https://www.rospotrebnadzor.ru/documents/details.php?ELEMENT_ID=30172,
https://rospn.gov.ru/documents/details.php?ELEMENT_ID=21797

For small and medium-sized businesses in these countries such services are a standard element of doing business rather than a one-off reaction to fines or enforcement notices.

2. Reasons for the maturity of the market abroad:

The maturity of this market in foreign countries is driven by:

- the high cost of violations and litigation;
- a well-developed culture of preventive risk management;
- a business focus on long-term sustainability;
- a high level of trust in specialised service companies.

As a result, entrepreneurs perceive spending on audits and ongoing support as an investment in risk reduction rather than an additional burden.

3. State of the market in the Russian Federation:

In the Russian Federation, the market for integrated fire safety, sanitary standards and occupational safety audit services is still at the formation stage.

At present, Russian small and medium-sized businesses are characterised by:

- fragmentation of services (separate specialists for fire safety, SanPiN and occupational safety);
- a focus on remedying violations after an inspection rather than before it;
- the absence of unified integrated solutions adapted to SMEs;
- a low level of systematic regulatory risk management.

Most enterprises turn to specialists reactively, only after receiving enforcement notices or fines, which leads to additional financial losses and business interruptions.

4. Current preconditions for the formation of the market in the Russian Federation:

In the Russian Federation there are stable preconditions for the active formation of this market:

- a growing number of inspections and identified violations;
- tightening regulatory requirements;
- increasing financial penalties;
- growing awareness of risks among entrepreneurs.

These factors are gradually shifting business behaviour from a reactive model to preventive compliance management, which creates a window of opportunity for new service solutions.

5. International experience in the development of the market for integrated audit and consulting services:

The maturity of this market in other countries is confirmed by the activities of large international companies such as:

- Bureau Veritas (France)⁶
- SGS (Switzerland)⁷
- TÜV (Germany)⁸
- Intertek (United Kingdom)⁹

These companies provide services in the field of regulatory compliance, risk assessment and support during inspections. Based on the results of 2023, the revenue of these companies amounted to:

- Bureau Veritas – EUR 5.9 billion (RUB 590 billion)
- SGS – more than CHF 6.6 billion (RUB 660 billion)
- Intertek – over GBP 3.4 billion (RUB 408 billion)
- TÜV – EUR 2.5 billion (RUB 250 billion)

According to estimates by analytical agencies, the global market for inspection, testing, certification and integrated audit services exceeded USD 250 billion in 2023, with an average annual growth rate of 6-7%¹⁰, which indicates sustained demand and the maturity of this segment.

Relevance of the NFQ project

The NFQ project is relevant because it:

- transfers successful international integrated audit practice to the Russian market;
- adapts it to the specifics of Russian small and medium-sized businesses;
- offers a single systemic service instead of fragmented services;
- establishes a new standard of interaction between business and the regulatory environment.

Thus, NFQ is focused on an emerging market with high growth potential and is able to take a strong position at an early stage of its development.

Goals:

1. Build a practical base of 15+ case studies and 10+ customer reviews for the portfolio during the first year of operation.
2. Create a profitable integrated safety audit service for small and medium-sized businesses.
3. Provide clients with legal peace of mind and protection against financial and reputational losses.

Objectives:

1. Develop standardised inspection methodologies for different business segments.
2. Reach a turnover of RUB 8.84 million in the first year of operation.
3. Develop checklists for the experts.

The essence of the business idea:

We replace three separate inspections (fire safety, SanPiN, occupational safety) with a single integrated diagnostic assessment. Instead of three contradictory reports, the client receives one strategic document with a risk rating and a ready-made, prioritised remediation plan, delivered under the guidance of a personal account manager.

Result: savings of up to 40% of the client's time and money + 100% confidence before any unannounced inspection. We do not sell reports — we sell peace of mind and protection of the business against fines and closure.

Legal form of the project:

The NFQ project is planned to be implemented in the form of a limited liability company (LLC).

This legal form has been chosen for the following reasons:

- the ability to enter into contracts with legal entities and individual entrepreneurs;
- a higher level of trust from corporate clients;
- the ability to scale the business and attract partners;
- limitation of the founders' liability to the amount of the charter capital.

Taxation regime:

As part of the NFQ project, it is planned to apply the **simplified taxation system (STS) at a rate of 15%**, which is the optimal regime for a service company with a high share of operating and labour costs.

This tax regime makes it possible to:

- reduce the tax burden at the initial stage of development;
- ensure transparency and simplicity of tax accounting.

Social significance of the project:

The NFQ project has pronounced social significance, since it is aimed at improving occupational safety and protecting the life and health of employees and visitors of small and medium-sized businesses.

Implementation of the project contributes to:

- reducing the risk of fires, accidents and workplace injuries;
- creating safe and comfortable working conditions;
- preventing the suspension of operations of socially significant facilities (cafés, children's centres, offices);

– raising the legal literacy of entrepreneurs in matters of occupational safety and sanitary safety.

Indicator	Value ¹¹
Enterprises served (year 1)	35
Jobs preserved	~700
Suspensions of operations prevented	~10
Business turnover preserved	~RUB 45 million
Tax revenue (personal income tax)	~RUB 49 million per year*
Reduction of emergency risks	20–30%

Key advantages of NFQ services compared with competitors:

1. An integrated approach

While narrow specialists inspect only their own area (fire safety, SanPiN or occupational safety), and consulting firms offer general strategic recommendations, NFQ provides a full 3-in-1 audit. We simultaneously check all three key areas, which gives the client a single picture of how the facility complies with statutory requirements.

2. A concrete outcome

Unlike narrow specialists, who issue a report without a remediation roadmap, and consulting firms, which limit themselves to general recommendations, NFQ provides the client with a ready-made step-by-step plan with priorities and deadlines. This makes it possible to start eliminating violations immediately.

3. Optimal cost

Our integrated service package costs RUB 80 000, whereas engaging three separate specialists would cost at least RUB 90 000, and the services of consulting firms start from

¹¹ The calculations are provided in the appendix

RUB 400 000. We offer the best price-to-quality ratio on the market.

4. Minimum turnaround times

The on-site audit takes 2–5 days, compared with 3–5 weeks when working with different specialists and 2–4 weeks when approaching consulting firms. The full cycle (audit + report + support until violations are remedied) takes up to 35 days — against 2–3 months for competitors. The client receives the final report within 7–9 days without any downtime for the enterprise. We achieve such speed of service delivery thanks to a ready-made system of checklists, a list of typical violations and a ready template for completing the final report.

5. Single point of responsibility

NFQ acts as a single contractor at all stages of the work, whereas when working with narrow specialists the client has to coordinate different contractors independently, and consulting firms often delegate tasks to third parties.

6. Specialisation in SMBs

Unlike consulting firms focused on large businesses, we offer services adapted to the needs and budget of small and medium-sized businesses. Our solutions are practical and feasible for enterprises in this segment.

7. A proactive approach

We do not merely record violations — we prevent problems before inspections by the supervisory authorities take place. This distinguishes us from most competitors, who deal with consequences.

As a result, NFQ offers a combination that is unique for the market: the comprehensiveness of consulting firms, the depth of analysis of narrow specialists and affordability for small and medium-sized businesses.

NFQ does not simply identify violations — it takes on the role of a partner that supports the client until the facility is brought into full compliance with the standards. This is a fundamentally new safety standard for Russian business.

Market analysis

A comparative analysis of competitors against a number of criteria is presented in Table 1.

Analysis of competitors by criteria (Table 1)

Criterion	Our service	Narrow-profile specialists				Consulting firms
		Fire safety specialist	Lawyers	Rospotrebnadzor experts	Occupational safety specialist	
Comprehensiveness of the inspection	3-in-1 (Fire safety, SanPiN, Occupational safety)	1 inspection area (fire safety)	1 inspection area (occupational safety)	1 inspection area (SanPiN)	1 inspection area (occupational safety)	3-in-1 (but at a strategic level, without in-depth technical expertise)
Legal support	At all stages (from the inspection application to the finished report)	No	Yes	No	No	Yes (full legal support at all stages)
Interaction	Support by an account manager	The client coordinates and schedules inspections independently				Support by a personal manager (high level of service)
Client workload	Low. One contract, one inspection, one report	High: many site visits, many contracts, many reports				Minimal (full turnkey project management)
Result for the client	A single report and an action plan with set priorities	Fragmented reports that may contradict each other; no single picture				A strategic report with recommendations on optimising business processes
Price	3-in-1 package 80,000	30,000	20,000	15,000	25,000	400,000
Inspection time	no more than 2 weeks	3-5 weeks in total				2-4 weeks (complex approval procedure)
Channels of interaction	• Direct sales • Partner programmes • Website with an online request form • Participation in tenders	• Word of mouth • Advertising in themed groups • Avito	• Advertising in themed groups • Legal consultations • Contract-based servicing	• Private practice • Consultations	• Outsourcing • One-off consultations	• Direct sales to large clients • Referrals and referral network • Participation in industry conferences
Client touchpoints	• Consultation • On-site audit • Report with recommendations • Support during remediation • Follow-up check	• Client request • On-site inspection • Report	• Consultation • Preparation of documents	• Inspection request • Site visit • Conclusion	• Request • Audit • Recommendations	• Strategic consultation • In-depth audit of business processes • Report with a transformation roadmap • Implementation of solutions • Long-term monitoring
Types of enterprises served	• Restaurants/café • Shopping centres • Office centres • Call centres • Clubs/bars	• Manufacturing • Warehouses • Shopping centres	All types of enterprises	• Food service • Medical institutions • Educational institutions	• Manufacturing • Offices • Warehouses	• Large corporate business • Federal chains • Manufacturing holdings • Investment projects

Target market and the main trends in its development

1. Description of the target market

The target market of the NFQ service is the small and medium-sized business (SMB) segment in the Russian Federation whose operations are subject to regular control by state supervisory authorities: EMERCOM, Rospotrebnadzor and Rostrud.

This segment includes enterprises for which:

1. non-compliance with statutory requirements directly entails financial, reputational and operational risks;
2. there is no in-house integrated safety specialist;
3. engaging consulting firms is economically impractical.

The segments of our target audience are presented in Table 3.

2. Size and potential of the target market

According to data from Rosstat¹² and the Federal Tax Service¹³, there are more than 6 million small and medium-sized businesses in the Russian Federation¹⁴, a significant proportion of which belong to segments subject to regular control.

Even if only a small share of such enterprises requests integrated audit services, the market has high scaling potential.

3. Key market trends

3.1. Tightening of state control

¹² <https://www.rosstat.gov.ru/>

¹³ <https://www.nalog.gov.ru/rn77/>

¹⁴ <https://rmsp.nalog.ru/>, <https://rosstat.gov.ru/folder/210/document/13223>

In recent years there has been an increase in supervisory activity by EMERCOM, Rospotrebnadzor and Rostrud. The number of unscheduled inspections and the size of fines are growing, which encourages businesses to prepare for inspections in advance rather than deal with the consequences of violations.

3.2. Shift of focus from "reaction" to "prevention"

Enterprises increasingly choose a proactive approach¹⁵ — preventing violations before inspectors arrive. This creates demand for integrated audit and ongoing support services rather than one-off consultations.

3.3. Rejection of fragmented services

Clients react negatively to the need to:

- work with several specialists;
- receive contradictory reports;
- coordinate contractors themselves.

The market is moving towards unified integrated solutions.

3.4. The growing value of time for SMBs

Small and medium-sized businesses are interested in services that:

- do not require lengthy approvals;
- minimise the owner's involvement.

This creates demand for a fast integrated audit format with a ready-made action plan.

4. Geographical focus and the serviceable market

At the initial stage of development, the NFQ project is focused on enterprises located in Moscow and the Moscow Region, where the bulk of business activity and a high density of target segments are concentrated.

As a result of geographical segmentation, a serviceable available market (SAM) of approximately 69 thousand enterprises was identified, which in monetary terms amounts to about RUB 5.52 billion per year.

5. Realistic target market of the project

¹⁵ <https://marketing.rbc.ru/>

Taking into account the limitations of the start-up team, marketing resources and operational capacity, the NFAQ project is guided by a conservative market capture scenario.

In the first year of implementation, it is planned to reach a serviceable obtainable market (SOM) of 35 clients (131 audits), which corresponds to a share of 0.05% of SAM and generates planned revenue of RUB 8.84 million per year.

Market structure and industry characteristics

Sources of requirements: state authorities (EMERCOM, Rospotrebnadzor, Rostrud), whose activities generate demand for preparatory services.

Types of players in the services market:

State authorities (punitive approach, no consulting)

Narrow-profile experts (former inspectors, cover 1 area)

Legal/consulting firms (expensive, slow, often without an on-site inspection)

Online services (document templates, no individual audit)

Industry principles: a highly fragmented market dominated by small players, with no federal-scale integrated solutions for SMBs. The key driver is business fear of unannounced inspections and operational losses.

The main risks of the project and the mechanisms for minimising them are presented in Table 2.

Table 2

Cause-and-effect analysis of project risks

Risk event	Factors influencing the occurrence of the event	Possible consequences	Risk mitigation measures
Increase in the tax burden	Changes in tax legislation	Growth of operating costs, reduced profit	Financial reserve, monitoring of changes in tax legislation
Change in the requirements of supervisory authorities	Introduction of new standards and regulations	Need to revise audit methodologies, increased costs	Continuous monitoring of legislation, updating of checklists and methodologies
Insufficient demand for services at the initial stage	Low customer awareness of the product	Reduced revenue, slower project payback	Active marketing campaign, participation in tenders
Expert errors during the audit	Human factor, high workload on staff	Reputational losses, claims from clients	Double-checking of reports, standardisation of procedures, staff training
Reputational risks	Negative reviews, conflict situations with clients	Reduced trust and customer churn	Working with reviews, feedback system, complaint-handling procedure
Shortage of qualified experts	Competition in the labour market, staff turnover	Decline in service quality, higher costs	Motivation system, training and retention of specialists

Value proposition and target audience analysis

Value proposition

For food service enterprises: we ensure preventive compliance with SanPiN and fire safety requirements, minimising the operational and reputational risks associated with unannounced inspections and suspension of operations.

For the entertainment and leisure business segment: we guarantee comprehensive compliance with the strict requirements of EMERCOM and environmental control, which ensures the continuity of your operations and protects you from financial sanctions.

For the corporate sector (offices, call centres): we create a legally impeccable and ergonomic working environment, which reduces the risk of labour disputes, increases staff loyalty and removes the grounds for sanctions by Rostrud.

Segmentation of the target audience is presented in Table 3.

Table 3

Segmentation of the target audience

Criteria	Food service	Entertainment business	Offices and call centres
Key regulations and risks	SanPiN 2.3/2.4 (food preparation units), fire safety • Risk: closure under a sanitary enforcement notice, fines for violations in food storage and dishwashing. • Fire safety: risks in the kitchen (dust collectors in extractor hoods, condition of electrical wiring).	Fire safety (Federal Law No. 123-FZ), SanPiN on noise • Risk: suspension of operations due to violations of evacuation routes and overcrowding of the venue. • Noise complaints from neighbours, ventilation violations.	Labour Code, SanPiN 2.2.4 (offices), fire safety • Risk: Rostrud inspections (incorrect formalisation of employment relations, absence of a special assessment of working conditions). • SanPiN: microclimate, lighting, noise.
Main "pain point" and motivation	"Fear of closure" A Rospotrebnadzor inspection can close the establishment for 90 days ¹ , which amounts to a financial catastrophe. The motivation is business continuity.	"Fear of sudden closure and conflicts" Night-time EMERCOM inspections triggered by complaints, conflicts with landlords and residents of neighbouring buildings. The motivation is to operate without incidents.	"Retaining the team and reputation" Employee complaints to Rostrud, staff turnover due to poor conditions, lawsuits over accidents. The motivation is to create a comfortable environment for employees.
Sanctions imposed (in case of violation)	CAO Article 6.6 (SanPiN): • Fine for individual entrepreneurs/officials: RUB 10-20 thousand • Fine for legal entities: RUB 30-50 thousand • Administrative suspension of operations for up to 90 days. CAO Article 20.4 (fire safety): • Fine for individual entrepreneurs: RUB 20-30 thousand • Fine for legal entities: RUB 150-200 thousand	CAO Article 20.4 (fire safety): • Fine for individual entrepreneurs: RUB 20-30 thousand • Fine for legal entities: RUB 150-200 thousand • Suspension of operations for up to 90 days. CAO Article 6.4 (violation of sanitary standards): • Fine for individual entrepreneurs: RUB 5-10 thousand • Fine for legal entities: RUB 50-100 thousand	CAO Article 5.27.1 (occupational safety): • Fine for individual entrepreneurs/officials: RUB 2-5 thousand • Fine for legal entities: RUB 50-80 thousand • Suspension of operations for up to 90 days. CAO Article 6.3 (SanPiN): • Fine for individual entrepreneurs/officials: RUB 1-2 thousand • Fine for legal entities: RUB 10-20 thousand
Frequency and type of inspections	High frequency (3 or more times a year), unannounced. Rospotrebnadzor, EMERCOM. Often triggered by customer complaints.	Medium/high frequency (1-3 times a year), night-time, unannounced. Mainly EMERCOM, Rospotrebnadzor for noise. Often triggered by residents' complaints.	Low/medium frequency, more often scheduled. Rostrud (per schedule), EMERCOM (during a scheduled inspection of the building).
Key objects of inspection	• Food preparation unit (storage, cooking) • Washing and disinfection • Dining area (labelling of tableware) • Ventilation systems	• Ventilation systems • Evacuation routes, exits • Alarm and fire-extinguishing systems • Venue occupancy load	• Workplaces (special assessment of working conditions) • Microclimate (temperature, humidity) • Lighting • Occupational safety documentation
Potential average order value	High (RUB 50-120 thousand) The complexity of kitchen inspection and the high risks justify the price.	Medium (RUB 40-90 thousand) Depends on the size of the venue and the complexity of the safety systems.	Low/medium (RUB 30-70 thousand) Less critical risks, but a larger number of standard facilities.
Potential for long-term cooperation	Medium/high Constant changes in the menu, seasonality and chef turnover require regular control in the kitchen.	High Changes in layout and high wear of equipment require constant fire safety monitoring.	High When hiring new employees or changing the office layout, regular audits and updates of occupational safety documents are required.

¹ https://www.rospotrebnadzor.ru/documents/details.php?ELEMENT_ID=21797

Target market segments

Within the NFQ project, the segments with the highest concentration of regulatory risks and the greatest readiness to purchase an integrated audit service were identified.

Food service enterprises (cafés, restaurants, fast food, canteens)

This segment is characterised by:

- a high frequency of inspections;
- strict sanitary requirements;
- increased risks of suspension of operations.

the food service segment is a key part of the **total addressable market (TAM)** and generates a significant share of the project's potential revenue.

2.2. Entertainment and leisure venues (bars, clubs, shisha lounges, anti-cafés)

This segment is characterised by:

- heightened control by EMERCOM;
- requirements regarding evacuation and mass gatherings of people;
- high reputational risk if violations are identified.

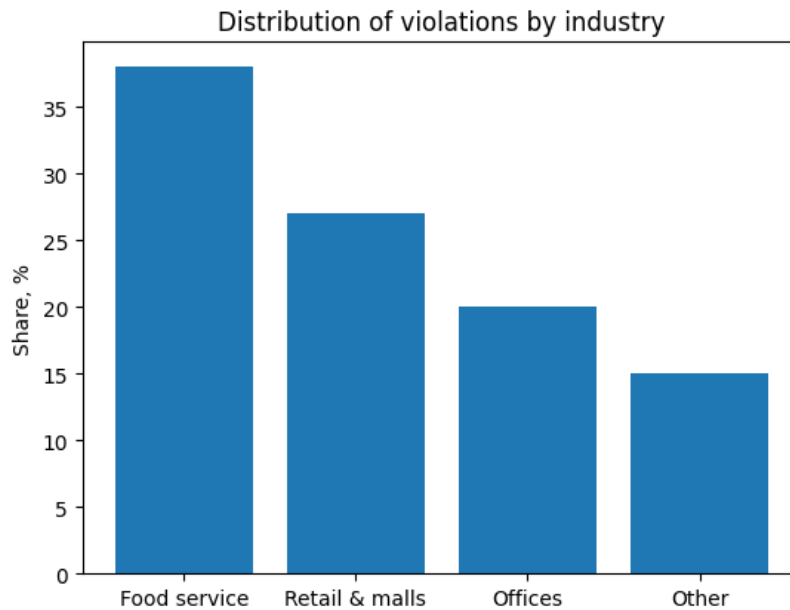

This segment is part of the core TAM and is distinguished by a high need for preventive safety measures.

2.3. Offices and the corporate sector (offices, call centres, small companies)

The segment is characterised by:

- inspections by Rostrud;
- mandatory correct occupational safety documentation;
- a high bureaucratic burden.

Despite the lower frequency of inspections compared with the food service sector, the segment has significant quantitative potential and stable demand.

(Figure 2)

Distribution of identified violations across the main industries of small and medium-sized business.

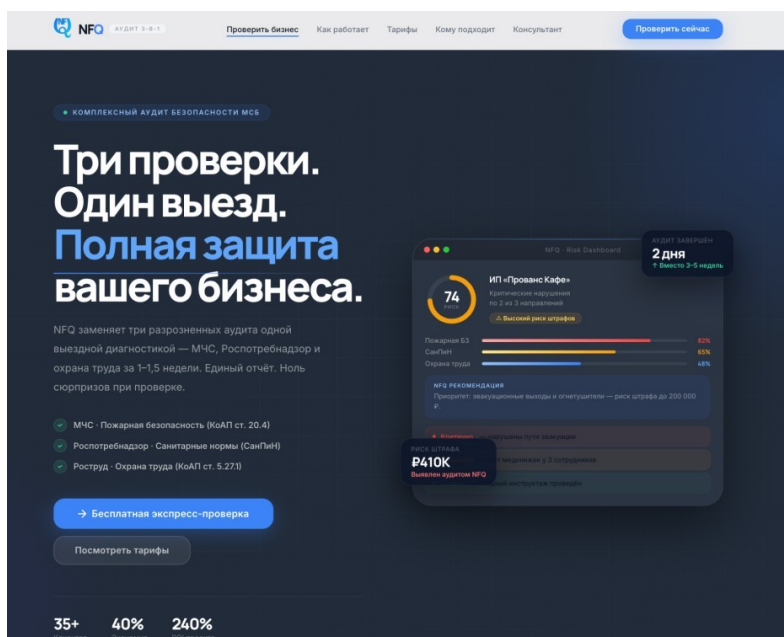

the chart is based on the State Report on Consumer Rights Protection in the Russian Federation in 2024
(https://www.rospotrebnadzor.ru/upload/iblock/94e/p0puy8xgisu9e1n6sziwpu2owjb1yr5f/GD_ZPP.pdf)

A brief profile of the NFQ client

A typical NFQ client is an SMB owner in Moscow with no in-house safety specialist, operating under constant regulatory risk and valuing speed and predictability.

Business model

Table 4

Key partners	Key activities	Value propositions	Customer relationships	Customer segments
1. Expert auditors (outsourced or under contract). 2. Contractors for eliminating violations (electricians, builders, ventilation installers). 3. Law firms for consultations and partner programmes. 4. Industry associations (for example, the Federation of Restaurateurs and Hoteliers).	1. Conducting the integrated on-site audit (core process). 2. Data analysis and preparation of reporting with a remediation plan. 3. Consulting support for the client (in the premium package). 4. Continuous monitoring of changes in legislation (SanPiN, Fire Regime Rules, Labour Code of the Russian Federation). 5. Sales and development of the partner network.	1. Integrated "3-in-1" audit (fire safety, SanPiN, occupational safety) for one price and one site visit. 2. A ready-made action plan with priorities and deadlines. 3. Protection against fines and sanctions, reduction of inspection risks. 4. Savings of 40% of the client's time and budget compared with separate inspections. 5. Support until full compliance is achieved (in the premium package).	1. A personal manager for the entire duration of the project. 2. Transparency at all stages (checklists, photo reports). 3. Subscription servicing (scheduled annual/semi-annual audits). 4. Loyalty programmes (discounts on repeat orders, premium services). 5. Money-back guarantee if the service does not meet the stated criteria.	1. Food service (cafés, restaurants, canteens). 2. Entertainment business (bars, clubs, shisha lounges, bowling). 3. Offices and call centres (open spaces, coworking spaces). Additionally: children's centres, fitness clubs, small manufacturing facilities.
Key resources			Distribution channels	
1. Human: certified experts in fire safety, SanPiN and occupational safety. 2. Intellectual: a database of regulations, inspection methodologies, checklists, reports. 3. Tangible: measuring equipment. 4. Financial: start-up capital for marketing and operating expenses. 5. Technological: CRM system (amoCRM), website, Telegram bot.			1. Direct B2B sales (cold calls, meetings). 2. Website with an online request form and a risk calculator. 3. Partner programmes with law firms, food service suppliers and accounting services. 4. Participation in tenders and industry exhibitions (for example, the "Restaurant Forum"). 5. Word of mouth and a referral programme.	

Operational plan

The start-up investment of the project is presented in Table 5.

Table 5

Start-up investment of the NFQ project

Investment item	Cost components	Amount, ₺	Rationale
Equipment	Basic set of instruments for measuring microclimate, lighting and other parameters (without capital-intensive laboratory assets)	350 000	The necessary minimum for service delivery; consistent with the intelligent-service model in which the key value is expertise rather than equipment
Development of methodology and standards	Creation of checklists, classification of violations, report structure, pilot testing, payment for lawyer services	20 000	Creation of an in-house audit standard — the basis of differentiation and reputational safety
Marketing and sales launch	Development of presentation materials, website/landing page, initial promotion	70 000	Ensuring market entry and attraction of the first clients
Legal and organisational set-up	LLC registration, contracts, standard templates, consultations	30 000	Ensuring the legal correctness of work with B2B clients
IT and operational tools	CRM, Notion, report templates, set-up of internal accounting	30 000	Support of processes, quality control and scalability
Financial cushion	Reserve to cover the first operating expenses	30 000	Minimisation of cash gaps at the start of the project
TOTAL start-up investment		530 000	Consistent with the financial model of the project

The sales plan for the first year of the project is presented in Table 6.

The production plan is presented in Table 7.

2. Production plan (service delivery)

Table 7

Plan for the volume of services provided

Product/Package	Quantity per month	Quantity per year	Annual revenue	Share in the portfolio
Integrated package (3-in-1)	4-5	57	4.560.000	52
Premium package (3-in-1 + support)	1-2	21	2.310.000	26
Basic package (fire safety/occupational safety and Rospotrebnadzor)	2-5	53 (30+23)	1.970.000	22
Total	10-11	~131	8.840.000	100

Service delivery process:

1. Receipt of a request from the client → online consultation regarding the audit date and the specifics of the enterprise (1 day)
2. On-site audit (2-5 days)
3. Data analysis by experts → provision of a detailed report on the identified violations, with a detailed plan for remedying them (2-4 days)
4. Support until violations are remedied (up to 30 days) (legal consultations, recommendations on finding contractors)

The main equipment for the project is presented in Table 8.

Table 8

Equipment

Type of equipment	Models/Specifications	Cost	Service life
Measuring instruments	• Class 1 accuracy sound level meter • GANK-4 gas analyser • TKA-PKM lux meter	~150.000	3-5 years
Recording devices	• Digital camera • Thermal imager • Video recorder	~120.000	3-4 years
Other devices	• Tablet with pre-installed software • Portable printer • Sampling kit	~80.000	2-3 years

(<https://novapribor.ru/>)

The main costs per audit are presented in Table 9.

Costs of an audit in one area (fire safety or occupational safety)

Cost item	Amount, ₺
Materials (PPE)	800
Energy	100
Expert remuneration	12.000
Depreciation of equipment	200
Logistics	4000
Manager remuneration	4000
Total cost price	21 100

Costs of an audit in one area (SanPiN / Rospotrebnadzor)

Cost item	Amount, ₺
Materials (PPE)	800
Energy	100
Expert remuneration	14.000
Depreciation of equipment	200
Logistics	4000
Manager remuneration	4000
Total cost price	23 100

Costs of an integrated audit (3-in-1)

Cost item	Amount, ₺
Materials (PPE)	800
Energy	300
Expert remuneration	40.000
Depreciation of equipment	500
Logistics	4000
Manager remuneration	5000
Total cost price	50 600

PREMIUM (3-in-1 + support)

Cost item	Amount, ₺
Materials (PPE)	800
Energy	300
Expert remuneration	48.000
Depreciation of equipment	500
Logistics	4000
Manager remuneration	8000
Lawyer services	10.000
Total cost price	71 600

4. Costs**Table 10****Staffing plan**

Position	Number	Functions	Salary
Administrator	2	Communication with clients, coordination of experts	Base salary 30.000 + bonuses
Lawyer	1	Provision of legal consultations	Base salary 50.000 + bonuses
Expert	2	Conducting audits and providing reports	Piece rate, from 5500 per site visit
Marketing specialist	1	Development of the marketing strategy, set-up of targeted advertising	Base salary 45.000 + bonuses

(According to hh.ru data)

2. VARIABLE COSTS (BY PACKAGE) (see Tables 9, 10, 11, 12)

BASIC (fire safety / occupational safety) variable costs: 21 100 ₺

BASIC (SanPiN) variable costs: 23 100 ₺

INTEGRATED (3-in-1) variable costs: 50 600 ₺

PREMIUM variable costs: 71 600 ₺

Fixed costs

Item	Amount / month
Marketing	45 000 ₺
IT / services	10 000 ₺
Administrative expenses	10 000 ₺

Total gross costs per month (TC): RUB 639,370 (RUB 7,672,440 per year: direct costs 5 552 100 + selling expenses 573 000 + administrative expenses 1 523 340 + expense reserve 24 000)

SMART GOALS:

Goal 1: build a practical base of 15+ case studies and 10+ customer reviews for the portfolio during the first year of operation.

Goal 2: achieve payback of the start-up investment (530 000 ₺) by month 6 and reach a net profit of at least RUB 900,000 by the end of the first year.

Financial Model

The full sales plan for year 1 is presented in Table 11: revenue and sales volumes, cost calculations and the profit calculated taking into account the chosen tax regime. The project performance indicators have been calculated. The calculations presented are substantiated and based on the results of the market analysis, as well as on the calculation of market potential indicators: PAM, TAM, SOM, SAM (the calculation is provided in the appendix).

Roadmap for the implementation of the NFQ project (Table 8)

Period	Stage	Goal of the stage	Key actions	Result
October – November	Preparation	Creation of a ready product and a core team	Formation of the team and roles; Development of the audit methodology (v1.0); Pilot testing; Finalisation of services and prices; Preparation of presentation materials	A product and a team ready to enter the market
December – January	Commercial launch	Building a portfolio of first case studies	Carrying out 5-10 pilot audits; Collecting feedback; Optimising processes; Focus on the food service segment	First case studies and customer reviews
February – April	Standardisation	Ensuring quality and reputational safety	Checklists v2.0; Unified wording; Double-checking of reports; Training and certification of experts	A standardised product and quality control
May – July	System	Turning NFQ into a centre of expertise	Centralisation of report approval; KPIs and SLAs; A single operational pipeline; Checklists v3.0	A manageable operating system
August – October	Scaling	Preparation for growth and replication	Development of the full methodology; Regulations and quality standards; IT minimum (CRM, version control, KPIs); Final unit economics of 1 audit	Readiness for scaling and licensing

Gantt chart (Figure 3)

Appendices

1. Summary table of performance indicators

Indicator	Value
Revenue (year 1)	8 840 000 ₺
Gross profit (year 1)	3 287 900 ₺
Net profit (year 1)	992 422 ₺
Return on sales (ROS)	11.2%
Gross profit margin (GPM)	37.2%
Return on investment (ROI)	187.2%
Payback period (PP)	6.4 months
Break-even point (revenue)	7 097 000 ₺ / year
Break-even point (audits)	≈ 105 audits per year
Average order value (integrated package)	80 000 ₺
Average margin per audit (3-in-1)	29 400 ₺ (36.8%)
Start-up investment	530 000 ₺
EBITDA (year 1)	1 241 160 ₺
Planned number of audits (year 1)	131 audits / 35 clients

2. Methodology for calculating the indicators

2.1. Revenue

Revenue is calculated as the sum of the products of sales volume and price for each product package over 12 months according to the sales plan (Table 6).

Package	Calculation
Integrated package (3-in-1)	57 pcs. × 80 000 ₺ = 4 560 000 ₺
Premium package	21 pcs. × 110 000 ₺ = 2 310 000 ₺
Basic (fire safety / occupational safety)	30 pcs. × 35 000 ₺ = 1 050 000 ₺
Basic (Rospotrebnadzor)	23 pcs. × 40 000 ₺ = 920 000 ₺
TOTAL	8 840 000 ₺

2.2. Gross profit and gross profit margin (GPM)

Calculation formulas:

Gross profit: Revenue – Direct (variable) costs

: 8 840 000 – 5 552 100 = 3 287 900 ₪

GPM: Gross profit / Revenue × 100%

: 3 287 900 / 8 840 000 × 100% = 37.2%

Direct costs include: remuneration of experts and managers for site visits, materials (PPE), logistics, depreciation of equipment and lawyer services for the Premium package. Cost price data — Table 9 of the business plan.

2.3. Net profit and return on sales (ROS)

Calculation of net profit (after taxes under the simplified taxation system at 15%):

Item	Amount
Gross profit	3 287 900 ₪
Selling expenses (marketing)	– 573 000 ₪
Administrative expenses	– 1 523 340 ₪
Profit from sales	1 191 560 ₪
Expense reserve	– 24 000 ₪
Taxable profit	1 167 560 ₪
Simplified taxation system tax, 15%	– 175 138 ₪
Net profit	992 422 ₪
ROS = NP / Revenue	992 422 / 8 840 000 = 11.2%

2.4. Return on investment (ROI)

ROI shows how many roubles of net profit are generated per rouble of start-up investment over the calculation period (1 year).

$$\text{ROI: (Net profit / Start-up investment)} \times 100\%$$

$$: (992\,422 / 530\,000) \times 100\% = 187.2\%$$

$$\text{ROI ratio: } 992\,422 / 530\,000 = 1.87$$

An ROI of 187.2% means that during the first year of operation the project recovers the start-up investment and generates a profit exceeding that investment by a factor of 1.87.

2.5. Payback period (PP)

The payback period is the period over which the accumulated net profit covers the start-up investment (530 000 ₺).

Period	Net profit / Accumulated total
Month 1 (December)	10 965 ₺
Month 2 (January)	72 632 ₺
Month 3 (February)	72 632 ₺
Month 4 (March)	99 739 ₺
Month 5 (April)	114 104 ₺
Month 6 (May)	125 919 ₺
Accumulated over 6 months	495 991 ₺
Month 7 (June)	95 701 ₺ → total 591 692 ₺ > 530 000 ₺
PP (exact)	$6 + (530\,000 - 495\,991) / 95\,701 \approx 6.4$ months

2.6. Break-even point (BEP)

The break-even point is the volume of revenue / number of audits at which the profit from sales equals zero.

Input data for the calculation:

Fixed costs per month (FC): Marketing (45 000) + IT (10 000) + Administrative (10 000) + Salaries of managers and the lawyer (approx. 155 000) = ~220 000 ₪

FC per year: $220\,000 \times 12 = 2\,640\,000$ ₪

Average margin per audit (CMu): $(\text{Revenue} - \text{Variable costs}) / \text{Number of audits} = (8\,840\,000 - 5\,552\,100) / 131 = 25\,098$ ₪

Contribution margin ratio (CM%): $\text{GPM} = 37.2\%$

BEP calculation:

BEP (revenue): $\text{FC} / \text{CM\%} = 2\,640\,000 / 0.372 = 7\,097\,000$ ₪ / year

: or $\approx 592\,000$ ₪ / month

BEP (audits): $\text{FC} / \text{CMu} = 2\,640\,000 / 25\,098 \approx 105$ audits / year

: or ≈ 9 audits / month

The planned volume (131 audits) exceeds the BEP (105 audits) by 25%, providing a margin of financial safety.

2.7. EBITDA

EBITDA = Profit from sales + Depreciation. The depreciation of equipment included in the cost of audits amounts to 49 600 ₪ / year (200 ₪ per basic audit and 500 ₪ per integrated/premium audit per Table 9 $\times$ 131 audits).

EBITDA: $1\,191\,560 + 49\,600 = 1\,241\,160$ ₪ / year

EBITDA margin: $1\,241\,160 / 8\,840\,000 = 14.0\%$

2.8. Unit economics: margin per audit

Package	Revenue – Cost price = Margin
Integrated (3-in-1)	$80\,000 - 50\,600 = 29\,400$ ₪ (36.8%)
Premium	$110\,000 - 71\,600 = 38\,400$ ₪ (34.9%)

Basic fire safety/occupational safety	35 000 – 21 100 = 13 900 ₺ (39.7%)
Basic Rospotrebnadzor	40 000 – 23 100 = 16 900 ₺ (42.3%)
Weighted average	≈ 25 098 ₺ (37.2%)

Rationale for the choice of CRM system:

We compared CRM systems for small business: amoCRM, Bitrix24, YClients. We chose amoCRM because:

1. It is sales-oriented — it is easily configured for our B2B funnel (from request to audit and follow-up support).
2. It automates routine work — reminders, letter templates, tasks for managers.
3. Out-of-the-box integrations — Telegram, WhatsApp, telephony, calendar.
4. Cheap and simple — for a team of 3 people ≈ 2 000 ₺/month, with an intuitive interface.
5. It grows with us — analytics, scripts and a partner module can be added.

Conclusion: amoCRM gives us speed, control and savings from day one without complex implementation.

Calculation of social significance:

1. Preservation of jobs

Target market for year 1: 35 enterprises (SOM)

- Average SMB headcount: 1. food service / entertainment: 15–25 people 2. offices / call centres: 20–40 people
- Conservative average: 20 employees per facility

Calculation: 35 enterprises × 20 employees = 700 jobs

2. Prevention of suspension of business operations

- Suspension of operations — up to 90 days
- Highest-risk segments: food service, entertainment

Economic effect for the city:

Assumption:

- average turnover of a small enterprise: $\approx 1.5\text{--}2$ million ₪ / month
- 3 months of downtime = 4.5–6 million ₪ of lost revenue

Conservative scenario:

- NFQ prevents suspension for at least 30% of clients
- $35 \times 30\% \approx 10$ enterprises

$10 \text{ enterprises} \times 4.5 \text{ million ₪} = 45 \text{ million ₪ of turnover preserved}$

3. Tax effect for the city

Main taxes of SMBs:

- Personal income tax (13%)
- Social contributions
- Simplified taxation system / profit tax

Conservative calculation for personal income tax:

- Average salary: 45 000 ₪
- Personal income tax per 1 employee: $45\,000 \times 13\% = 5\,850$ ₪ / month

Calculation:

$700 \text{ employees} \times 5\,850 \text{ ₪} \times 12 \text{ months}$
 $= 49.1 \text{ million ₪ of personal income tax per year (the aggregate tax effect from the employees of NFQ clients, not from the company itself)}$

Methodology for calculating the target market and marketing metrics (PAM / TAM / SAM / SOM)

5.1. PAM — Potential Available Market

PAM includes all enterprises in the Russian Federation whose activities fall under fire safety, sanitary and occupational safety requirements. The following sources were used in the calculation:

- Rosstat¹⁶ — data on the number of small and medium-sized businesses;
- Federal Tax Service of Russia¹⁷ — registers of legal entities and individual entrepreneurs;
- Ministry of Economic Development of the Russian Federation¹⁸ — analytical reports on SME development.

PAM calculation:

- Total number of SMEs in the Russian Federation: 6.0 million
- Share of enterprises obliged to comply with fire safety, SanPiN and occupational safety requirements: 70%

$\text{PAM} = 6.0 \text{ million} \times 70\% = 4.2 \text{ million enterprises}$

Conclusion: the potential market of the project is large-scale and does not limit the growth of the NFQ service.

5.2. TAM — Total Addressable Market

TAM reflects the market volume in the target segments addressed by the NFQ service across the entire territory of the Russian Federation.

Target segments and sources:

- Food service enterprises — 120 thousand (Russian Restaurant Association);
- Entertainment venues and retail facilities — 45 thousand (Association of Shopping Centres);
- Offices and call centres — 180 thousand (HeadHunter data).

The average order value of an integrated audit is taken at the level of RUB 80 000.

TAM calculation:

- Food service: $120\,000 \times 80\,000 \text{ ₰} = 9.6 \text{ billion ₰}$
- Entertainment: $45\,000 \times 80\,000 \text{ ₰} = 3.6 \text{ billion ₰}$
- Offices / call centres: $180\,000 \times 80\,000 \text{ ₰} = 14.4 \text{ billion ₰}$

¹⁶ https://www.rospotrebnadzor.ru/documents/details.php?ELEMENT_ID=21797

¹⁷ https://www.consultant.ru/document/cons_doc_LAW_34661/

¹⁸ <https://hh.ru/>, <https://www.avito.ru/moskva/vakansii>

TAM = 345 000 enterprises = 27.6 billion ₺ per year

Conclusion: TAM demonstrates a significant market volume and a high capacity of the chosen niche.

5.3. SAM — Serviceable Available Market

SAM includes the part of TAM that is geographically and operationally accessible to the NFQ project at the first stage of development.

The calculation took into account:

- Share of enterprises in Moscow and the Moscow Region: $\approx 18\text{--}20\%$ of TAM
- transport and logistics accessibility

SAM calculation:

- concentration of target business segments.
 $\text{SAM} = 345\,000 \times 20\% \approx 69\,000$ enterprises
- Volume in monetary terms $69\,000 \times 80\,000 \text{ ₺} = 5.52$ billion ₺ per year

Conclusion: SAM represents a clearly defined and economically active market consistent with the NFQ launch strategy.

5.4. SOM — Serviceable Obtainable Market

SOM reflects the market volume that the NFQ project is able to capture in its first year of operation, taking into account operational and marketing constraints.

Main assumptions:

- 50 leads $\rightarrow$ 8 deals per month;
- seasonal decline in demand: -30% (summer months and January);
- realistic sales plan: 35 clients per year;
- average order value: 80 000 ₺ (integrated package).

$\text{SOM} = 131 \text{ audits} / 35 \text{ clients} = 8.84$ million ₺ of revenue per year

Conclusion: SOM has been calculated conservatively and corresponds to a sustainable project launch scenario.

Visualisation of the market funnel:

PAM (4.2 million enterprises)

↓ 8.2% of PAM

TAM (345 000) → 27.6 billion ₺

↓ 20% of TAM

SAM (69 000) → 5.52 billion ₺

↓ 0.05% of SAM

SOM (131 audits, 35 clients) → 8.84 million ₺

Plan for increasing market share:

Period, year	Target SOM	Activities
1	35 clients (0.05% of SAM)	• Launch of pilot projects • Building a base of reviews • Fine-tuning of processes
2	100 clients (0.14% of SAM)	• Increasing the team to 4 experts • Growth of the marketing budget • Launch of subscription servicing
3	250 clients (0.36% of SAM)	• Expansion into new regions • Automation of processes

Rationale for the realism of SOM:

- Calculated on the basis of the B2B services sales funnel
- The operational constraints of the start-up team have been taken into account
- Moderate growth rates consistent with industry benchmarks
